¹ Age is calculated based on date of birth and event date, which is onset date if known.

² Infant botulism rates are calculated using the population under 1 year of age.

³ Perinatal hepatitis B cases are defined as infants >1 month of age through 24 months of age who were born in the US to HBsAg positive mothers. The rates were calculated using the population under 2 years of age, which approximates this cohort.

⁴ Influenza-associated pediatric mortality is calculated using the population under 18 years of age.
