<sup>1</sup> Infant botulism rates are calculated using the population under 1 year of age.

<sup>2</sup> Perinatal hepatitis B cases are defined as infants >1 month of age through 24 months of age who were born in the US to HBsAg positive mothers. The rates were calculated using the population under 2 years of age, which approximates this cohort.

<sup>3</sup> Pediatric-associated influenza deaths are calculated using the population under 18 years of age.
