¹ Age is calculated based on date of birth and event date, which is onset date if known.

² Infant botulism rates are calculated using the HSR populations under 1 year of age.

³ Perinatal hepatitis B cases are defined as infants >1 months through 24 months of age. The rates were calculated using the HSR populations under 2 years of age, which approximates this cohort.

⁴ Influenza-associated pediatric mortality rates were calculated for the HSR populations <18 years of age.
