Note: Per Emerging and Acute Infectious Disease Unit Data Suppression policy, beginning with data published after September 2021, subgroup case counts of 1-4 and fatalities counts of 1-9 are not provided (-). Additional counts (--) are suppressed to prevent back-calculation of suppressed small counts.

¹ Diseases listed reflect those that were notifiable in Texas based on Texas Administrative Code and where cases were reported in the current reporting year. Counts are reported by Texas DSHS Health Service Regions. Case counts are presumed to be underestimates of true disease incidence due to incomplete reporting. Data in this table may not match tables in articles in this publication that were written prior to completion of data review for this report, or other previously published materials.

² Prion Disease is not included in this table.

³ Due to the extenuating circumstances arising from the COVID-19 Pandemic, a considerable decline in the reported number of cases was noted across many notifiable conditions by the Texas Department of State Health Services for 2020. Thus, the reported case counts and associated rates may not accurately reflect the incidence of disease in the population.

⁴ Infant botulism cases are for patients under 1 year of age by definition.

⁵ California serogroup viruses includes California encephalitis, La Crosse, Jamestown Canyon, Keystone, snowshoe hare, and trivittatus viruses.

⁶ Effective in 2016, *Haemophilus influenzae* type b infection, invasive was expanded to all invasive *Haemophilus influenzae* regardless of type.

⁷ Influenza-associated pediatric mortality cases are under 18 years of age by definition.

⁸ Includes all cases of invasive *Neisseria meningitidis* including cases of meningitis, septicemia, and joint infections.

⁹ Rickettsiosis, unspecified replaced "dual reporting" in typhus/spotted fever cases in 2015. It was added to the Epi Case Criteria Guide in 2016 and defined as clinically compatible cases with serological evidence of elevated IgG or IgM antibody reactive with spotted fever and typhus group antigens by IFA that cannot be classified as either flea-borne typhus or spotted fever group rickettsioses.

¹⁰ These arbovirus counts include both neuroinvasive and non-neuroinvasive cases.

¹¹ Vancomycin-intermediate resistant *Staphylococcus aureus* (VISA)--*Staphylococcus aureus* with a vancomycin minimum inhibitory concentration (MIC) of 4 µg/mL through 8 µg/mL.
