2008 - 2009 Texas Influenza Surveillance Information

[Current Flu Activity Report in PDF Format](#)

Influenza Surveillance Report for MMWR Week 31

The influenza (flu) activity level for Texas for the week ending August 8, 2009 was "local." For definitions of flu activity levels please see

<http://www.cdc.gov/flu/weekly/fluactivity.htm>. During week 31, 120 (11.8%) specimens tested by NREVSS laboratories in Texas were positive for influenza. The percentage of visits for influenza-like illness as reported by ILINet providers in Texas was below the regional baseline.

Reports from Health Service Regions

Reports were received from all Health Service Regions (HSRs) for week 31. HSR 2/3 reported an increased level of flu activity compared to week 30. HSRs 6/5S, 7, 8, 9/10, and 11 reported the same level of flu activity compared to week 30. HSRs 1 and 4/5N reported a decreased level of flu activity compared to week 30. For a map of Health Service Regions please visit the following website: www.dshs.state.tx.us/regions/state.shtm

Laboratory Results

During week 31, 13 hospital laboratories and public health agencies across Texas reported conducting a total of 1,020 influenza tests (antigen, culture, and PCR) to the National Respiratory and Enteric Virus Surveillance System ([NREVSS](#)) sponsored by the Centers for Disease Control and Prevention (CDC). Of the 669 antigen detection tests that were performed, 109 were positive for influenza A/not subtyped. The positive results were reported from Bexar, Brazos, Collin, Dallas, Ellis, Harris, Lubbock, Nueces, and Tarrant counties. A total of 22 reports of PCR- or culture-confirmed seasonal or unsubtype influenza were received from public health laboratories, Scott & White Memorial Hospital in Temple, Texas Children's Hospital in Houston, and other sources for the following counties during week 31 (August 2-August 8):

Influenza A/H1 (seasonal)	Influenza A/H3	Influenza A/not subtyped	Influenza B
(none)	Bexar County	Bell County (5) Bexar County Brazos County (3) Dallas County (2) Harris County (9) Lubbock County (2)	(none)

Positive point-of-care rapid tests for influenza were reported by sentinel providers throughout the state (see county map below).

Novel Influenza A Virus Infections

Case investigations are ongoing, and the number of confirmed cases changes frequently. Please see the DSHS website (<http://www.texasflu.org>) and the CDC website (<http://www.cdc.gov/h1n1flu/>) for more information on the current investigation.

Antigenic Characterization

CDC has reported antigenic characterization results from 51 seasonal influenza isolates [20 influenza A/H1, 8 influenza A/H3, and 23 influenza B viruses] and 3 novel influenza A H1N1 viruses received from the DSHS Laboratory since the beginning of the 2008–09 flu season. Influenza A/H1 [20]

- All 20 viruses were characterized as A/Brisbane/59/2007, the influenza A/H1 component of the 2008–09 influenza vaccine for the Northern Hemisphere.

Influenza A/H3 [8]

- All 8 viruses were characterized as A/Brisbane/10/2007, the influenza A/H3 component of the 2008-09 influenza vaccine for the Northern Hemisphere.

Influenza B (B/Victoria/02/87 and B/Yamagata/16/88 lineages) [23]

Victoria lineage [16]

- Sixteen of the influenza B viruses were characterized as belonging to the B/Victoria lineage.

Yamagata lineage [7]

- Seven viruses were characterized as B/Florida/4/2006, the influenza B component for the 2008-09 influenza vaccine for the Northern Hemisphere.

Novel influenza A/H1 [3]

- All 3 viruses were characterized as A/California/07/2009-like (H1N1), the reference virus selected by the World Health Organization (WHO) as a candidate for the novel influenza A H1N1 vaccine.

Antiviral Resistance

Since September 28, 2008, 22 seasonal influenza A/H1 isolates, 7 influenza A/H3 isolates, 22 influenza B isolates, and 3 novel influenza A H1N1 isolates from the DSHS laboratory have been tested by CDC for antiviral resistance.

Flu Types/Subtypes	Isolates Tested (n)	Resistant Viruses, Number (%)		Isolates Tested (n)	Resistant Viruses, Number (%)
		Oseltamivir	Zanamivir		
Influenza A/H1 (seasonal)	22	22 (100%)	0 (0)	22	0 (0)
Influenza A/H3	7	0 (0)	0 (0)	7	7 (100%)
Influenza B	22	0 (0)	0 (0)	N/A*	N/A*

Influenza A/H1 (novel)	3	0 (0)	0 (0)	3	3 (100%)
------------------------	---	-------	-------	---	----------

*Adamantanes are not effective against influenza B viruses.

CDC has issued interim recommendations for use of antiviral medications in the 2008-09 influenza season. Those recommendations are available at:

<http://www.cdc.gov/flu/professionals/antivirals/index.htm>.

Influenza-Associated Pediatric Mortality

One influenza-associated pediatric fatality occurred in a 14-year-old resident of Health Service Region 7 during week 31. At this time it is unknown whether the child had significant underlying medical conditions; however, the child had a methicillin-sensitive *Staphylococcus aureus* infection during his influenza illness. A specimen obtained from the child was positive for novel influenza A H1N1 by PCR. Texas has reported 14 influenza-associated pediatric fatalities during the 2008-09 influenza season.

School Closures and Institutional Outbreaks

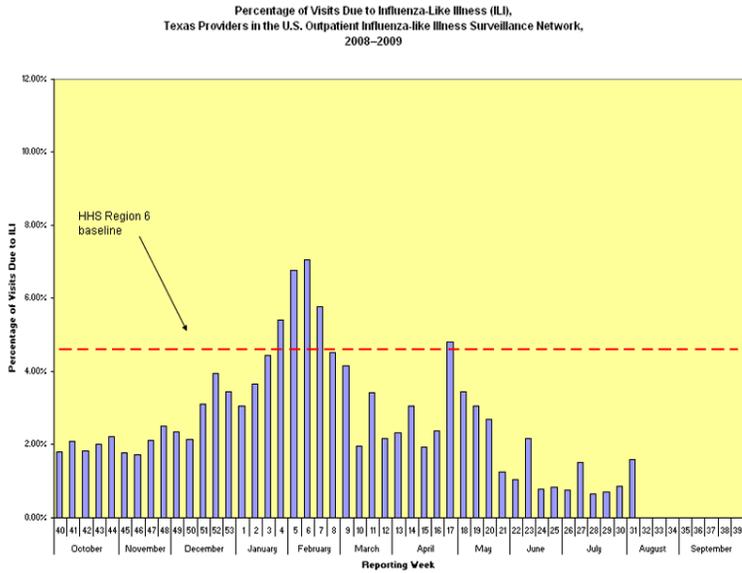

One outbreak of ILI was reported in a Dallas County daycare during week 31. DSHS has issued guidance for cases of ILI and novel influenza A H1N1 in summer camps. This guidance is available at www.dshs.state.tx.us/swineflu/summercamp-flu-guide.shtm.

U.S. Outpatient Influenza-like Illness Surveillance Network

Twenty-nine providers in Texas reported data to the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) (formerly known as the U.S. Influenza Sentinel Provider Surveillance System) on patients with influenza-like illness (ILI) and total patients seen for any reason during week 31. Fourteen (48%) of these providers saw at least one patient with ILI. Of all patient visits during this week, 1.59% were due to ILI. The ILI baseline for HHS Region 6 (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas) of the United States is 4.6% for the 2008-2009 season. The baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons plus two standard deviations.

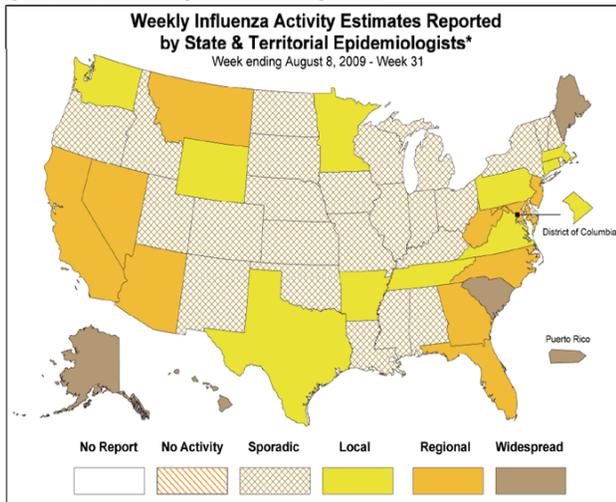

Percentage of Visits for Influenza-Like Illness Reported by the US Outpatient Influenza-Like Illness Surveillance Network (ILINet) in Texas as of 8/14/2009								
3:04:38 PM								
week	# Reporting	Age 0-4	Age 5-24	Age 25-64	Age over 64	Total ILI	Total Patients	% ILI

National Influenza Activity Map

The current U.S. flu weekly report may be found at <http://www.cdc.gov/flu/weekly/fluactivity.htm>.

*This map indicates geographic spread and does not measure the severity of influenza activity.

For more information on flu surveillance activities in the State of Texas, please visit our main [surveillance](#) page.

¹Influenza activity level corresponds to current MMWR week only and does not reflect previous weeks' activity.

²The majority of influenza cases are not reportable by law to the Texas Department of State Health Services. This map contains data from sentinel sites and does not represent all influenza cases in the state.

³Positive laboratory results are reported according to specimen collection date or date received in the lab if the former is unknown.
